Weekly Ice Forecast for Chesapeake and Delaware Bays

Week of: 3/27/2017

Analyst: Alexandra Kabeiseman (nic_analyst@noaa.gov)

Weather Outlook:

Spring arrives this week across the Mid-Atlantic, with this morning's water temperatures in the mid 40's and air temperatures in the mid 50's. Short term model guidance shows no opportunity for ice growth. Longer range guidance and trends indicate a slightly above normal pattern in the 1 to 3 week range. With the current ongoing warm trend and climatology suggesting we are already past freezing temperatures, this will be the final outlook of the 2016-2017 ice season. Products will resume in December 2017.

Ice Conditions:

Ice Free.

Ice Forecast:

Delaware Bay:

Ice Free.

Upper Chesapeake Bay:

Ice Free.

Lower Chesapeake Bay:

Ice Free.
